***Election/Restrictions***

1. Applicant's election of invention in Group I (claims 34, 35, 38, and 40-42) on 05/01/07 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 43-44, and 47-55 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to nonelected inventions, there being no allowable generic or linking claim.

**EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The amendment has been initiated to correct the minor informality in the application.

Authorization for this examiner's amendment was given in a communication with Stephen Gass (Reg. No. 38,462) on 07/12/07. The application has been amended as follows:

In the claims:

Claims 43-44 and 47-55 have been cancelled.

***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach that brake pivots up and down relative to the table to

maintain an operative position relative to the blade when the elevation mechanism moves the blades up and down relative to the blade, as set forth in claim 34.

Regarding claim 34, Lokey (3,785,230) teaches a table saw including a frame having a table defining a work surface. Lokey also teaches a rotatable blade coupled to the frame and extendable up through the work surface. Lokey also teaches a detection means for detecting a dangerous condition between a person and the blade. Lokey also teaches a brake means for engaging and stopping the blade upon detection of the dangerous condition between the person and the blade. Lokey also teaches that the brake means is maintained in operative position relative to the blade.

Lokey does not teach an elevation means adapted to move the blade up and down relative to the blade and the brake pivots up and down relative to the table to maintain an operative position relative to the blade when the elevation mechanism moves the blades up and down relative to the blade.

Meckoski (2,501,134) or Comer (3,368,596) teaches an adjustment mechanism that adjusts the position of a sub-frame including the saw blade up and down relative to the table.

However, Lokey in view of Meckoski or Comer fails to teach that brake pivots up and down relative to the table to maintain an operative position relative to the blade when the elevation mechanism moves the blades up and down relative to the blade, as set forth in claim 34.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claim 34.

Art Unit: 3724

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
